

PRODUCT REQUIREMENTS DOCUMENT

Navneet Patidar

Portfolio Website — Build-Ready Specification

UI/UX & Product Designer · Creative Developer

Version 1.0

Prepared: July 2026

Prepared for: Development / build team (human or AI)

Contact: designer.navneet.patidar@gmail.com · +91 7878913449

0. How to Use This Document

This PRD is written to be **build-ready** — everything a developer or an AI build assistant needs (content, copy, structure, page-by-page specs, design tokens, component behavior, and technical requirements) is contained here. It should not require a follow-up conversation to start building.

The source material for this PRD was a raw, unorganized questionnaire answered by Navneet, with many fields marked "**skip**," "**NA**," or **left ambiguous**. Rather than leaving gaps, every such field has been resolved with a considered decision, written the way a senior product designer would make it — grounded in the actual project work, hero design, and brand voice Navneet already has in progress. Two labels are used throughout so nothing is mistaken for something Navneet explicitly said:

- **CONFIRMED** — came directly from Navneet's answers or uploaded design.
- **DESIGNER DECISION** — filled in / decided on Navneet's behalf because the original answer was skipped, unclear, or contradictory. Callout boxes like the one below flag these throughout the document.

DESIGNER DECISION: *Anywhere you see a callout box like this one, it marks a decision made to fill a gap. Review these first — they're the fastest way to sanity-check this PRD before handing it to a developer.*

Items still genuinely pending from Navneet (resume file, certificates, real testimonials, high-res final assets) are marked **TBD** and treated as placeholder content in the build — the site should ship without blocking on them.

Table of Contents

A. Personal Brand

A.1 — Identity

Field	Value
Full name	Navneet Patidar
Display name (site)	Navneet Patidar
Professional title(s)	UI/UX & Product Designer · Creative Developer
Pronunciation / short form	"Navneet" — used casually in first-person copy (e.g. footer sign-off)

DESIGNER DECISION: Titles: the questionnaire gave "UI/UX & Product Designer." The homepage hero design (already built) uses "UI/UX DESIGNER" and "CREATIVE DEVELOPER" as the two headline lines. Both are kept: **UI/UX & Product Designer** is the primary title used in metadata, resume-style contexts, and the About page; **Creative Developer** is kept as the secondary/hero-only label since the visual design already commits to it and it signals his front-end fluency.

A.2 — Logo

Confirmed input: "simple text of my name."

DESIGNER DECISION: No logomark exists yet. Decision: build a **wordmark-only identity** — set in the same display typeface as the hero headline. Use the initials **NP** as a compact monogram for the favicon, browser tab icon, and mobile nav collapsed state, in the same weight/style as the wordmark (not a separate illustrated logo). No abstract icon/symbol logo — keep it typographic, consistent with the brutalist-lite, type-led homepage already designed.

A.3 — Tagline(s)

- **Hero tagline (as already designed, homepage only):** "Crafting digital experiences that blend meaningful aesthetics with performant engineering."
- **Brand tagline (used in meta description, resume header, LinkedIn-style contexts):** "Crafting pixel-perfect user interfaces today, while engineering the scalable product experiences of tomorrow."

DESIGNER DECISION: Two taglines were present across the source material. Rather than picking one, they're assigned distinct jobs: the shorter one stays exactly as already implemented on the hero (don't change shipped design); the longer one is repurposed as the SEO meta description and any place a fuller one-liner is needed (resume PDF header, LinkedIn banner copy, email signature).

A.4 — Bios

Short bio (used on: hero micro-intro if needed, LinkedIn-style cards, footer "About" teaser) — 40 words

"UI/UX & Product Designer and B.Tech IIoT student at USAR, GGSIPU, New Delhi. I design research-backed, accessible interfaces and build them well enough to hand straight to engineering — currently exploring that overlap through freelance, hackathons, and community design work."

Long bio (used on: About page hero paragraph) — ~140 words

"I'm a B.Tech student specializing in Industrial Internet of Things (IIoT) at the University School of Automation and Robotics, GGSIPU, New Delhi — and a UI/UX & Product Designer by focus and freelance practice. My work sits at

the intersection of research-led design and front-end execution: I like understanding *why* a product is failing a user before I open Figma, and I like being able to speak the language of the engineers who'll build what I design."

"That shows up across my project work — from PayGO, a voice-guided UPI layer designed for users UPI apps usually fail, to a live freelance product I built end-to-end for a jewellery retail client. Outside of client and personal projects, I contribute design and content work for AWS Cloud Club GGSIPU, and I'm an active hackathon competitor (BuildSprint, UXelerate, MOCKUP, UX Voyage). I'm currently open to product design internships/roles and select freelance collaborations."

A.5 — Design Philosophy

DESIGNER DECISION: *Not answered directly. Written from evidence in his own project write-ups (PayGO's reframing of "payments are hard" into "mistakes are terrifying"; Amazon redesign's hierarchy-first approach) rather than generic design-philosophy language.*

"Good design starts by re-stating the problem until it's uncomfortable, not comfortable. Most interface problems people bring me aren't really visual problems — they're trust problems, confidence problems, or hierarchy problems wearing a UI costume. I design in a way that's easy to hand to a developer: systemized components, deliberate type and color decisions, and interfaces that fail gracefully for the users who are usually designed around, not for — low-vision, low-literacy, low-tech."

A.6 — Core Values

- **Evidence over opinion** — design decisions should trace back to a user problem, not a trend.
- **Craft as respect** — pixel-level care is a way of respecting the people who'll use the product.
- **Design that ships** — a beautiful screen that can't be built isn't a finished job.
- **Curiosity as a habit** — actively competing in hackathons/designathons to keep learning under real constraints.

A.7 — Three Keywords

Research-led. Accessible. Ship-ready.

A.8 — Unique Value Proposition

"I'm a designer who researches like a product thinker and executes like a front-end developer — so what I hand off doesn't need to be re-interpreted, it can be built."

A.9 — Things to Avoid (site-wide content/tone rules)

- No stock-photo people, no generic "team high-fiving" imagery — only Navneet's own portrait, project screenshots, and typographic elements.
- No inflated or unverifiable claims ("industry-leading," "world-class") — impact statements should be specific and honest, using qualitative outcomes where hard metrics don't exist yet.
- No leaking of confidential client information for the Pratham International project beyond what Navneet has already written for public use (see Section F.6) — no client screenshots, no financial/business data, no prototype link.
- No dense paragraphs of unexplained jargon — case studies should be scannable in under 60 seconds per section.

- Avoid a childish or overly whimsical tone anywhere outside the BharatVibe project narrative, where the tribute-themed language is intentional and should be preserved as-is.

B. Career Goals

DESIGNER DECISION: None of this section is published verbatim on the live site — career goals (salary, dream companies, rankings) are recruiter-internal, not portfolio content. This section exists so the **About/Services copy and CTA language are strategically aligned** with what Navneet is actually optimizing for. Treat it as a brief, not as page content.

Field	Answer
Primary goal	Land a full-time Product Designer / UI-UX Designer role
Preferred role	Product Designer, UI/UX Designer
Target geography	India, open to remote-friendly global roles
Target industries (<i>designer decision — inferred from project focus</i>)	Fintech & accessibility-driven products, civic/space-tech, cultural/heritage tech, consumer apps
Ideal projects (<i>designer decision</i>)	Products with a real accessibility or inclusion angle (per PayGO), and culturally distinctive concept work (per BharatVibe)
Salary/stipend expectations	Not disclosed — never published

Implication for site copy: the homepage, About, and Services pages should read as a **product designer available for full-time roles who also freelances** — not as a freelance-first agency site. CTA priority: "View Work" / "Download Resume" for recruiters first; "Start a Project" for freelance clients second (this matches the hero design, which already leads with both CTAs).

C. Education

C.1 — Higher Education (shown on About page)

Field	Value
University	University School of Automation and Robotics, GGSIPU (East Delhi Campus), New Delhi
Degree	B.Tech
Branch/Specialization	Industrial Internet of Things (IIoT)
Duration	2024 – 2028
Current year	3rd year (2nd year completed; 3rd year begins August 2026)
CGPA	8.34

DESIGNER DECISION: Show CGPA on the site only if Navneet confirms he's comfortable publishing it — many designer portfolios omit GPA entirely since hiring for design roles is portfolio-led, not transcript-led. **Default build decision:** include it in a collapsed "Education details" accordion on the About page, not in the main timeline, so it's available but not a focal point.

C.2 — Prior Education (compact timeline entry, not expanded)

Years	School	Result
2020–2022	Jawahar Navodaya Vidhyalaya	10th — 89.80%
2022–2024	Adarsh Bal Niketan Sr. Sec. School	12th (PCM) — 87%

C.3 — Coursework

DESIGNER DECISION: Not answered ("couldn't understand, ask me later"). Decision: **omit a coursework list from v1** — this is the correct default for a design portfolio anyway (recruiters care about output, not a transcript). Leave a commented-out content slot in the CMS/config for Navneet to fill in later if he wants.

C.4 — Certifications

DESIGNER DECISION: Only one certificate was supplied (AWS Cloud Club GGSIPU 2025, Core Team Member — Certificate of Appreciation). Navneet flagged more are coming. Decision: build a **horizontal certificate strip component** on the About page designed to hold 4–6 certificate cards; ship with 1 populated and the rest simply not rendered (component should gracefully support 1–N items, not require a fixed count).

- Certificate 1 (confirmed): AWS Cloud Club GGSIPU 2025 — Core Team Member, Certificate of Appreciation. Asset: uploaded certificate image, to be placed at `/public/certificates/aws-cloud-club-2025.jpg` (or equivalent CMS asset field).

C.5 — Languages

Hindi — fluent · English — professional working proficiency

C.6 — Academic & Competition Achievements

Full list consolidated and de-duplicated in **Section G — Achievements** (the source material listed the same achievement list twice, once under Education and once under Achievements). Two purely academic entries belong here specifically:

- National Science Fair 2018–19 — 1st Rank in Rajasthan, 4th Rank in India
- YET 2022 — 11th Rank in Rajasthan

D. Skills & Tools

DESIGNER DECISION: Raw answers gave a flat, unordered list (Figma, Visual Designs, Microsoft Designer, Wireframing, Prototyping, UI/UX Design, Canva, User Experience Research) and explicitly asked me to decide the rest ("your choices") against the original topic list (UX Research, Wireframing, Visual Design, Design Systems, Accessibility, HTML, CSS, JavaScript, React, Tailwind, Figma, Other). Proficiency levels and the dev-skill entries below are inferred from evidence in his own project write-ups (accessibility-first reasoning in PayGO, component/variant-based prototyping in ISRO 2.0) — flag any of these to Navneet to confirm before publishing, especially the Development row.

D.1 — Design Skills (shown as a skill-bar or tag grid on About page)

Skill	Level	Evidence
UI/UX Design	Expert	Primary discipline across all 6 case studies
Figma	Expert	Primary tool — every project prototype is a Figma file
Wireframing & Prototyping	Expert	PayGO, Flashback, BharatVibe all show iteration-based prototyping
Visual / UI Design	Expert	BharatVibe, Amazon redesign, Pratham International visual system
UX Research	Proficient	PayGO's problem framing shows structured research thinking
Design Systems	Proficient (<i>designer decision</i>)	Pratham International color-and-component system; portfolio itself is a systemized build
Accessibility-first design	Proficient (<i>designer decision</i>)	PayGO is explicitly an accessibility/inclusion-first product
Graphic Design (Canva, Microsoft Designer)	Proficient	Vedam Advisors internship — logos, social creatives, brand collateral

D.2 — Front-End / Development Skills

DESIGNER DECISION: The hero design brands Navneet as a "Creative Developer," but the raw questionnaire never confirmed HTML/CSS/JS/React/Tailwind proficiency levels. Decision: show these honestly as **working/learning proficiency**, not "Expert," so the site doesn't overclaim. Navneet should adjust levels directly if his actual proficiency differs.

Skill	Level
HTML & CSS	Working proficiency
JavaScript	Working proficiency
React	Familiar / currently building with
Tailwind CSS	Familiar / currently building with

D.3 — Other Tools

- Figma
- Canva

— Microsoft Designer

E. Experience

DESIGNER DECISION: AWS Cloud Club GGSIPU was listed under "Experience" in the raw answers, but it's a student community/leadership role, not paid employment. Decision: moved to **Section G — Achievements** → **Leadership** to keep the Experience section reading as clean professional history (Recruiters scan Experience sections looking specifically for paid/professional roles). Testimonials for all roles: Navneet noted these will be uploaded later — component should support 0–N testimonials per role without breaking layout.

E.1 — Instant AI

Field	Value
Role	Designer (Part-time)
Duration	April 2026 – Present
Responsibilities	Designing posters, posts, and visuals for Instant AI's brand presence across social platforms; contributing to UI and user-experience improvements

- Designed the posters, posts, and visuals for branding of Instant AI across social media platforms.
- Contributed to improving UI and overall user experience.

E.2 — Vedam Advisors

Field	Value
Role	Graphic Design Intern
Duration	November 2025 – February 2026
Responsibilities	Brand identity and visual design for company branding projects

- Designed the company logo and visual identity elements for branding projects.
- Created social media creatives and promotional graphics.
- Developed visual layouts translating concepts into clear designs.
- Maintained brand consistency across digital materials.
- Incorporated feedback and revisions to refine final outputs.

Display order rule (developer note)

List roles **reverse-chronologically by start date**: Instant AI (Apr 2026) first, Vedam Advisors (Nov 2025) second. This is a fixed 2-item list for v1 — build the component to accept more entries without a redesign.

F. Projects

Navneet has three types of project material: **6 full UI/UX case studies**, **2 logos**, and **15–20 posters/graphic pieces**. No polished, recruiter-ready case study write-ups exist yet in his portfolio — but he shared exactly the structure he wants used (a full case-study-writing framework, reproduced and applied below), and detailed raw notes per project. This PRD turns those raw notes into finished, ready-to-publish case study content for each project.

F.1 — Case Study Framework (apply to every project page and to all future projects)

This is Navneet's own specification for how a case study should be structured, kept intact because it should govern the **template**, not just this batch of content:

- **Case study card** (on the Work grid): 1–2 real product screens, never a logo/abstract graphic. Action-oriented title (not "Mobile App Redesign"). Subtitle hints at the problem or outcome. Visual style consistent across all cards.
- **Cover/intro**: descriptive title ("what + why," not just a brand name), subtitle, role/team/timeline/platform labels, hero visual.
- **Executive summary**: 2–4 sentences, metadata block, early teaser of outcome/impact, and a note on whether it was a shipped product, a redesign, or a student project.
- **Problem statement**: formula — "[User type] struggle with [pain point] because [root cause]. This leads to [negative outcome]. We know this because [evidence]." Reveal the solution direction early — don't make the reader scroll for it.
- **Process (selective, not exhaustive)**: discover → define → design → test → deliver, narrated through decisions ("I chose X because Y"), showing iterations side-by-side where they exist.
- **Visuals in a three-tier hierarchy**: hero "wow" shot, process visuals (sketches/wireframes) with captions explaining *why*, evidence visuals (before/after, test results). Embed the interactive prototype where available.
- **Outcomes & impact**: metrics if available; honest qualitative substitutes if not ("5/5 users completed the task," "reduced steps from 7 to 3"). What was learned, what would change next time, next steps.
- **Cross-cutting rules**: one cohesive visual style per case study; scannable in under 60 seconds per section; descriptive/insight-driven headings, not generic labels ("Users want AI benefits without compromising privacy," not "Research"); end each case study by linking to the next one so recruiters never hit a dead end.

DESIGNER DECISION: Two of the six projects currently have thin material (ISRO 2.0 has no documented problem statement/process beyond "first project, focused on learning animation"; Amazon has no problem statement or process at all, only outcomes). Rather than inventing a fake research process for these, the template is built to **gracefully render only the sections that have real content** — a case study with only 3 of 7 sections filled in is honest and still useful; a fabricated persona or fake user quote is not. Content owners can enrich these later without a template change.

F.2 — Work Page (`/work`) — Grid, Order & Filtering

Content type filter tabs: All · Case Studies · Freelance · Graphic Design

Card order (top to bottom / left to right), with rationale:

#	Project	Tag(s)	Card image rule
1	Pratham International	Freelance · Confidential	No live screen exists to

#	Project	Tag(s)	Card image rule
			publish — use the client color-palette swatch composition as the card visual (see F.6) instead of a UI screenshot
2	PayGO	Case Study · Accessibility	Payment confirmation screen (hero visual of the flow)
3	BharatVibe	Concept · Personal Project	Home feed screen showing the tribute-themed UI
4	Flashback	Hackathon · Adobe Designathon, Tryst'25 (IIT Delhi)	Memory-timeline or capsule screen
5	Amazon — Product Page Redesign	UX Study · Redesign Exercise	Before/after split screen
6	ISRO 2.0	Personal Project · First UI/UX Project	Homepage "solar system" hero screen

DESIGNER DECISION: Order prioritizes: (1) the most "real," client-validated work first — even though it can't show visuals, its scope (OCR, inventory, admin, AI assistant) is the most product-complete; (2) PayGO next as the most fully-reasoned, portfolio-ready case study; (3) the rest by a mix of craft distinctiveness and recency. Navneet flagged Pratham International as "should be first priority" himself — this order honors that while being upfront in the card copy that it's confidential.

Graphic Design tab: a masonry image grid of the 2 logo projects and 15–20 posters, each opening a lightbox on click (no full case study page needed for these — caption only: title, client/purpose, year, tool used).

F.3 — Case Study 1: Pratham International

Field	Value
Title (page H1)	Pratham International — Jewellery Retail Operations App
Subtitle	An OCR-powered pricing, inventory, and wishlist app built for jewellery wholesalers — Navneet's first paid freelance project.
Type	Freelance · Confidential client project
Role	Solo product & UI/UX Designer
Platform	Mobile app (Android/iOS — <i>designer note: confirm exact platform with Navneet before publishing</i>)
Status	Confidential — client requested no public screenshots or live prototype link

Executive Summary

Pratham International is Navneet's first paid freelance project: a full operations app designed for jewellery wholesalers, covering price-scanning, inventory management, employee onboarding, and a customer wishlist flow. Per the client's confidentiality request, this case study is presented as a **written scope and design-decision summary only** — no interface screenshots or prototype link are published.

Problem

Jewellery wholesalers relied on manual, error-prone processes for two things at once: telling a customer an accurate final price on the spot (gold/silver/diamond prices move daily), and tracking which physical pieces had already been shown, sold, or reserved. Employees needed a faster way to look up a product and quote a price without repeated manual calculation, and customers needed a way to shortlist pieces across a visit without forcing staff to re-pull the same items.

Scope & Key Features Designed

- **OCR-based price lookup:** staff scan a product's tag/details; the app calculates and displays the final price using that day's metal rates, then generates the bill.
- **Live metal-rate homepage:** today's gold, silver, and diamond prices shown on the home screen so pricing is always current.
- **Employee Manager:** admin can onboard new employees, creating profile, user ID, and password per staff member.
- **Inventory Management:** bulk inventory upload via Excel; pieces are automatically removed from inventory the moment a bill is generated for them.
- **Wishlist flow:** employees add products to a customer's wishlist during a visit, so the customer can compare and decide at the end rather than re-scanning or re-locating pieces.
- **AI chatbot & voice assistance:** an onboarding-support screen designed to help new employees and wholesalers navigate the app.

Design System (published — the one asset the client cleared for public use)

Token	Hex	Usage
Primary	#1E352F	Primary buttons, app bar, headers, major brand elements
Accent / Gold	#C5A059	Active tabs, verified badges, "Add to Cart," highlights
Canvas	#FBFBFA	Main screen background (glare/eye-strain reduction)
Surface	#FFFFFF	Product cards, inventory tables, dialog popups
Text — primary	#1C1C1A	Titles, descriptions, critical product specs
Text — secondary	#6A6A66	Labels, weights, purity details (e.g. 18k, VVS1)

Outcome

Delivered a working design covering the full operational loop — scan, price, sell, restock — for a live paying client, without forcing staff to learn an entirely new mental model of how they already worked.

DESIGNER DECISION: No quantitative impact metrics (adoption %, time saved) were supplied. Rather than inventing a number, the case study states the qualitative outcome only. If Navneet later gets a usage or time-saved figure from the client, add it to the Outcome section — it will meaningfully strengthen this card.

Confidentiality & Legal Note

DESIGNER DECISION: Navneet's own material both labels this project confidential and names the client. Recommendation before publishing: confirm with the client (or re-check the freelance agreement) whether the client name, description of features, and color palette are approved for public use — the description here should only go live once that's confirmed. If in doubt, the client name can be shown as "**a jewellery wholesale retailer**" instead.

F.4 — Case Study 2: PayGO

Field	Value
Title	PayGO — A Voice-Guided UPI Layer for the Users Fintech Forgot
Subtitle	Reframing digital payments from "hard to use" to "terrifying to get wrong" — and designing for the fear, not just the flow.
Type	Case Study · Accessibility & Inclusive Design
Origin	Started as a submission for UX Voyage designathon, NSUT, New Delhi; independently researched and expanded afterward (added AI framing, dynamic highlighting, more screens)
Role	Solo UX/UI Designer
Font	Noto Sans
Colors	#662AB2 (primary) · #FFFFFF

Executive Summary

PayGO is a voice-guided UPI (Unified Payments Interface) layer designed for the segment of India's population digital payments still fail: rural users, low-literacy users, the elderly, and people with low vision. Rather than building a new payment app, PayGO sits on top of the existing UPI framework as an accessibility-first interaction layer, replacing silent visual scanning and typing with a spoken, confirmed, error-proof flow.

Problem

Low-literacy, low-vision, elderly, and generally low-tech users struggle with digital UPI payments because most payment interfaces silently assume a baseline of literacy, vision, and confidence these users don't have. This leads a large, digitally-payment-ready population to keep avoiding UPI altogether. We know this because it's a well-documented, large-scale gap in India's fast-expanding digital payment ecosystem.

The sharper insight that shaped the whole design: these users aren't actually scared of the *act* of paying — they're scared of making an **irreversible mistake** or falling victim to fraud. That reframe — from "payments are hard" to "mistakes are terrifying" — is the design's real starting point.

Design Strategy — Three Pillars

- **Calm interface:** minimal visual distraction, large high-contrast elements, a strictly linear payment flow so the user is never confused about what step they're on.
- **Voice-first interaction:** a voice assistant as the primary mode of interaction, giving clear, non-controlling guidance at every step so the user always feels in charge.
- **Error-proof flow:** mandatory verbal repetition and confirmation of recipient, amount, and payment status — the direct mechanism addressing the core fear of irreversible mistakes.

Key Features & Architecture

- Voice-guided interaction — removes cognitive load by letting the user speak instead of navigate.
- Mandatory verbal confirmation — prevents accidental transfers by requiring an explicit "yes" before money moves.
- Dynamic highlighting — reduces decision errors by visually reinforcing whatever option the voice assistant is currently reading aloud.
- Multi-language support — widens accessibility across India's linguistic diversity.
- On-device (Edge AI) voice processing — cuts latency, gives near-instant responses, and keeps voice data private by design, not just by policy.

How It Works — Pipeline

User voice input → PayGO's on-device ASR (automatic speech recognition) interprets the voice → dynamic highlighting + voice feedback confirm what was understood → the user securely enters their UPI PIN → the transaction is verified through NPCI's UPI APIs → payment completes.

PayGO integrates with already-authenticated UPI APIs via SDK — it is explicitly an **accessibility layer on top of existing banking/fintech infrastructure**, not a rebuilt payment network. That's a deliberate scope decision: innovate on experience, not on payment rails.

Flow Comparison (use as a before/after visual on the page)

Traditional UPI app	PayGO
Open app → Scan → Enter → Verify → PIN → Done	Speak → System highlights & reads option aloud → User confirms → PIN → Done

Same number of steps — fundamentally different cognitive demand at each one: spoken and confirmed, rather than read and typed.

Expected UX Impact

- Reduced mis-tap risk
- Increased user confidence
- Ability to use the app independently, without needing a family member's help
- Minimal learning time for new users

DESIGNER DECISION: These are the designer's stated expected outcomes, not measured results from a usability test — the case study should be worded as "designed to achieve" rather than "achieved," since no test data was supplied. If Navneet later runs even an informal 3–5 user test, replace this section with real qualitative results (e.g. "4/5 first-time users completed a payment unassisted") — it will make this the strongest case study on the site.

Prototype

Interactive Figma prototype — embed on the page.

```
<iframe style="border: 1px solid rgba(0,0,0,0.1);" width="800" height="450"
  src="https://embed.figma.com/proto/wtZu0RcNmbq6g7WlcWxNIn/XYZ_PayGO?node-id=1-393&p=f&scaling=scale-down&content-scaling=fixed&page-id=0%3A1&starting-point-node-id=1%3A340&embed-host=share"
  allowfullscreen></iframe>
```

Closing Line (use verbatim as page pull-quote)

"PayGO optimizes for certainty rather than speed — turning a payment into a guided conversation where the system confirms user intent before executing anything."

F.5 — Case Study 3: BharatVibe

Field	Value
Title	BharatVibe — What If Our Freedom Fighters Had Instagram?
Subtitle	A tribute-based UI concept reimagining Instagram through the soul of India — not an app redesign, but an emotional timeline of India's journey.
Type	Concept · Personal Project
Timeline	Solo project, August 2025 (Independence Day)
Font	IBM Plex Serif
Theme color	#1D0C00

Executive Summary

BharatVibe asks a bold "what if": what if heroes like Subhash Chandra Bose, Rani Laxmi Bai, and Sardar Patel could share their moments the way we share on Instagram today? Every core interaction of a familiar social app is renamed and re-skinned through Indian independence-era symbolism — turning a UI exercise into a tribute.

Concept Mapping (Instagram convention to BharatVibe reinterpretation)

Standard UI Element	BharatVibe Reinterpretation	Symbolic Meaning
Home	India Gate	Honors the fallen — the digital gateway to stories of sacrifice
Explore	Telescope of Tiranga	A modern Bharat Darshan — discovering legends & heritage
Reels	Ashoka Chakra / Veer Gaathayein	The wheel of bravery — each spin holds a freedom tale
Notifications	Shankh (conch)	Symbol of awakening — a call to engage with patriotic echoes
Messages / Comments	Patra Scroll	Inspired by ancient letters, delivering thoughtful dialogue
Share	Pigeon Mail	Homage to pigeon posts — delivering emotions across timelines
Save	Ancient Locker	Like preserving scripts and relics — save what matters
Story	Your Struggle	Personal story reframed as personal struggle/journey

Why This (designer's own words, used as page pull-quote)

"Because freedom is not just in textbooks — it lives in our emotions, our platforms, and now... our designs."

Prototype

```
<iframe style="border: 1px solid rgba(0,0,0,0.1);" width="800" height="450"
  src="https://embed.figma.com/proto/X86rdnqnt3CYH6z8GV0wq0/Bharat-Vibe?node-id=1-9&p=f&scaling=scale-down&content-scaling=fixed&page-id=0%3A1&starting-point-node-id=1%3A9&embed-host=share"
  allowfullscreen></iframe>
```

Tone Note (developer/content note)

DESIGNER DECISION: This is the one project where a warm, poetic, emoji-forward voice (🧠 📸 🗓️ 📅 🧑🏻) is intentional and part of the concept's identity — preserve it in the on-page copy rather than flattening it into the neutral case-study tone used elsewhere on the site. It works precisely because it stands apart.

F.6 — Case Study 4: Flashback

Field	Value
Title	Flashback — AI-Powered Digital Memory Keeper
Subtitle	An AI journaling app that helps people revisit, reflect, and relive forgotten memories through smart categorization and digital time capsules.
Type	Hackathon · Adobe Designathon, Tryst'25, IIT Delhi
Team	Navneet Patidar & Arman Singh
Context	Navneet's first-ever designathon, completed after ISRO 2.0
Font	Karla
Colors	#900C3F · #FFFFFF

Executive Summary

Flashback is an AI-powered journaling and memory-keeping app that helps users revisit, reflect, and relive forgotten memories. By combining AI-driven categorization, smart notifications, and digital time capsules, it lets users experience their past in a deeply personal way.

Key Features

- **Photo Journaling** — combine photos with notes and reflections for richer, more meaningful memories.
- **AI Event Categorization** — automatically sorts memories into events (vacations, birthdays, festivals) based on metadata like time, location, and sentiment.
- **Seasonal Memory Notifications** — AI resurfaces memories relevant to the current season or upcoming holidays.
- **Digital Time Capsules** — lock special moments to be revisited in the future.
- **Emotion-Based Tagging** — AI detects emotion in journal entries and photos to personalize memory recommendations.

How It Works — AI Integration Flow

User uploads a memory (photo, journal, or voice note) → AI analyzes metadata (date, location, people, weather) → context understanding (recognizes event type, identifies emotion via NLP/sentiment analysis, extracts key topics from journal text) → categorization & tagging (assigns tags like "Beach Trip" or "Family Time," links similar past memories, suggests emotion-based labels like "Nostalgic" or "Joyful") → smart notifications & retrieval (seasonal/holiday reminders, time-capsule alerts, related-memory recommendations).

Signature Feature: Digital Time Capsule — Preserve, Reflect, Relive

The centerpiece of the app: users lock away cherished moments to rediscover in the future, designed for personal reflection, shared memories, and milestone celebrations.

- Add a title & description to capture the essence of the memory.
- Select photos, journal entries, or voice notes to preserve.
- Auto-updating albums — choose people & events to build a dynamic album that evolves over time.
- Add members — share the capsule with friends & family for a collective memory experience.
- Set an unlock date — a year from now, or a decade later.
- Smart notification when the unlock moment arrives.

Why it matters: revisits past emotions, celebrates milestones, enables shared nostalgia with loved ones, and (in a further-out concept extension) an AI-generated AR memory recreation that lets users "walk through" past moments via 3D reconstructions.

Prototype

```
<iframe style="border: 1px solid rgba(0,0,0,0.1);" width="800" height="450"
  src="https://embed.figma.com/proto/qdNT0g0i3azd97fntAKI6o/Adobe-Designathon?node-id=51-572&scaling=scale-down&content-scaling=fixed&page-id=0%3A1&starting-point-node-id=51%3A572&show-proto-sidebar=1&embed-host=share"
  allowfullscreen></iframe>
```

DESIGNER DECISION: No explicit problem statement or measured outcome was documented for this hackathon entry beyond the feature description. Render the page with Summary → Features → How It Works → Signature Feature → Prototype, and simply omit a "Problem" and "Outcome" section rather than fabricating one — consistent with the framework's own instruction to only include sections with real substance.

F.7 — Case Study 5: Amazon — Product Page Redesign

Field	Value
Title	Amazon Product Page — A Hierarchy-First Redesign
Subtitle	Same information, same functionality — redesigned to cut visual noise and let the important things win.
Type	UX Study · Redesign Exercise
Constraint	Keep all existing information and functionality — improve structure only, not scope

Executive Summary

A redesign of Amazon's product page aimed at reducing distraction and improving usability, while deliberately preserving every piece of existing information and functionality — a constrained hierarchy-and-clarity exercise rather than a feature redesign.

What Changed

Area	Improvement
Information hierarchy	Price, product title, and CTA buttons stand out far more clearly; related information is grouped into cards instead of being scattered

Area	Improvement
Visual clutter	The original page feels dense and overwhelming; the redesign introduces better whitespace and cleaner separation between sections
Scanning speed	Users can find key information (price, offers, stock, delivery, CTA) much faster
Card-based layout	Offers, specifications, reviews, and trust badges are easier to distinguish from one another
Consistency	Border radius, spacing, typography, and icon usage feel unified rather than inconsistent

Design Principle (page pull-quote)

"Improve usability without forcing users to adapt to a completely new mental model."

Prototype

```
<iframe style="border: 1px solid rgba(0,0,0,0.1);" width="800" height="450"
  src="https://embed.figma.com/proto/ECj0DxTheByc4ZInWm0z2g/Amazon-Product-Redesign?scaling=scale-down&content-scaling=fixed&page-id=0%3A1&node-id=29-2256&embed-host=share"
  allowfullscreen></iframe>
```

DESIGNER DECISION: No formal problem statement or persona was documented — this reads correctly as a UX audit/redesign exercise rather than a full end-to-end case study, and should be tagged as such on its card ("UX Study," not "Case Study") so it sets the right expectation before a recruiter clicks in.

F.8 — Case Study 6: ISRO 2.0

Field	Value
Title	ISRO 2.0 — Unveil the Solar Wonders
Subtitle	Navneet's first-ever UI/UX project — a solar-system exploration concept built to learn component-based animation.
Type	Personal Project · First UI/UX Project
Timeline	December 2024
Font	Syncopate
Theme	Dark

Executive Summary

ISRO 2.0 is a concept space-exploration website design built primarily as a learning project — Navneet's first UI/UX project, created to practice Figma's component/variant system through motion. It is presented on the site as an origin-story project, not a research-driven case study, and framed that way in its intro copy so the difference in maturity from later projects (like PayGO) reads as growth, not inconsistency.

What Was Built

- **Home page:** all planets shown revolving around the sun, used to learn timed, looping component animation.
- **Missions page:** hovering animation built using Figma components and variants.
- **Articles page:** informational content about the solar system.

- **Navigation:** News, Missions, Articles, About, and a "Contact Us" CTA button (per the design shown in the original file).

Designer's Own Reflection (use as page pull-quote)

"It was my first project, so it wasn't focused on design systems too much — the goal was learning animation through components and variants."

Prototype

```
<iframe style="border: 1px solid rgba(0,0,0,0.1);" width="800" height="450"
src="https://embed.figma.com/proto/IuQgFJlNiNXG3lwRoDnRrr/ISRO-2.0?node-id=10-445&starting-
point-node-id=4%3A6&scaling=scale-down-width&content-scaling=fixed&embed-host=share"
allowfullscreen></iframe>
```

F.9 — Graphic Design & Visual Work (mini-gallery, not a full case study)

Shown under the "Graphic Design" filter tab on the Work page as a masonry image grid.

Item type	Count	Card content
Logos	2	Title, purpose/client (if not confidential), year, tool used
Posters	15–20	Title/occasion, year, tool used (Canva / Microsoft Designer / Figma)

DESIGNER DECISION: Actual logo and poster image files were not included in the source material — this section defines the **component and layout only**. Navneet needs to supply the final image assets (see Section M — Final Notes / Asset Checklist) before this tab can go live; ship the tab hidden or with a "coming soon" state until assets arrive, rather than blocking the rest of the site's launch.

F.10 — End-of-Case-Study Navigation (applies to all 6 project pages)

Every case study page must end with a "Next Project" link/card (per the framework's own closing rule: never let a recruiter hit a dead end). Order follows the same sequence as the Work page grid (F.2), wrapping from the last project back to the first.

G. Achievements

DESIGNER DECISION: The source material listed the same competition list twice (once under Education, once under Achievements) without indicating which entries are hackathons vs. purely academic vs. leadership. De-duplicated and categorized below by type, matching the questionnaire's own sub-topics (Competitions, Hackathons, Awards, Leadership, Volunteering, Talks, Open Source, Certificates).

G.1 — Competitions, Hackathons & Awards (shown as a timeline/grid on About page)

Year	Achievement
2024	Phenomenal Frame '24 — 1st Rank in Poster Designing
2025	Top 8 Finalists — UXelerate, USAR, Delhi
2025	Top 10 Finalists — MOCKUP 4.0 Designathon, MUJ Jaipur
2025	Top 10 Finalists — UX Voyage, NSUT, Delhi
2025	3rd Position — Ideatex, organized by BAIT
2026	1st Position — BuildSprint Challenge, ARSD, Delhi

Academic competitions (school-era, shown in About page's education timeline, not the design-achievement grid):

- National Science Fair 2018–19 — 1st Rank in Rajasthan, 4th Rank in India
- YET 2022 — 11th Rank in Rajasthan

G.2 — Leadership & Community

Organization	Role	Duration	Contribution
AWS Cloud Club GGSIPU	Design & Content Team Member	Aug 2025 – Present	Helped organize technical and non-technical college events as part of the design team; designed the club's website

G.3 — Volunteering / Talks / Open Source

DESIGNER DECISION: Not confirmed in source material. Decision: **omit these sub-sections from v1** rather than showing empty states — GitHub profile link (Section H) already covers the "open source presence" signal for now.

G.4 — Certificates

See Section C.4 — certificate strip component, 1 of N populated (AWS Cloud Club 2025), remainder pending.

H. Portfolio Content & Contact Info

H.1 — Confirmed Links & Contact Details

Field	Value
Email	designer.navneet.patidar@gmail.com
Phone	+91 7878913449
LinkedIn	https://www.linkedin.com/in/navneet-patidar/
Behance	https://www.behance.net/navneetpatidar
GitHub	https://github.com/navneetpatidar422
Location (public-facing)	New Delhi, India

DESIGNER DECISION: Phone number: confirm with Navneet whether he wants this visible in plain text on a public site (spam/scraping risk) or gated behind a "Reveal number" click / shown only in the downloadable resume. Recommended default: show on-site as a click-to-reveal or click-to-call link, not raw text, and always include it in the resume PDF.

H.2 — Resume

DESIGNER DECISION: File not yet supplied. Build the "Download CV" button (already present in the hero design) to point at a resume file path (e.g. `/assets/navneet-patidar-resume.pdf`) that Navneet will upload before go-live. Button should be present and styled from day one — this is a launch-blocking asset, tracked in the Final Notes checklist (Section M).

H.3 — Testimonials

DESIGNER DECISION: Navneet explicitly asked for **sample placeholder testimonials** to be used until real ones are collected, labeled with a username pattern like "SAMPLE_01."

Build spec: a testimonial carousel/grid component on the Home and/or About page, populated with 3 clearly-labeled placeholder entries:

- SAMPLE_01 — "[Placeholder testimonial — replace with real client/collaborator feedback]"
- SAMPLE_02 — "[Placeholder testimonial — replace with real client/collaborator feedback]"
- SAMPLE_03 — "[Placeholder testimonial — replace with real client/collaborator feedback]"

Component must support swapping in real testimonials (name, role/company, quote, optional headshot) without a rebuild — treat it as a content array, not hardcoded markup.

H.4 — Deferred / Not Included in v1

- **Hidden case studies** — none yet; all 6 are public from launch.
- **Blog** — not started; omit the page and nav item entirely. Add to roadmap (Section M).
- **Resources / Downloads / Playground** — not requested; omit.

I. Visual Identity — Design System

DESIGNER DECISION: The questionnaire answer for this whole section was "skip" — but Navneet separately supplied a fully art-directed homepage design (screenshot + written technical breakdown), which is treated as the **canonical source of truth** for the entire site's visual identity. This section captures that spec exactly as designed, then extends it — filling in the tokens/rules a homepage-only screenshot can't specify — so every other page (Work, case studies, About, Services, Contact) inherits one consistent system instead of drifting.

I.1 — Design Direction

"**Brutalist-lite**" — massive, chunky display typography layered behind a monochrome portrait, softened by a warm cream/amber palette and a clean grid-based layout. Bold and structural, but never cold — the warmth of the color palette is what keeps the brutalist type from feeling aggressive.

I.2 — Color Tokens

Token	Value	Usage
--color-bg	#F7F4EE (warm cream/off-white)	Global page background
--color-bg-gradient	Radial/linear warm amber-peach glow	Overlay behind center subject and toward bottom corners of hero-style sections
--color-ink	#111111 (near-black / deep charcoal)	Massive display type, primary buttons, nav links, all body headings
--color-muted	Muted charcoal/gray	Secondary/body text, sub-headlines
--color-surface	#FFFFFF / light cream	Secondary buttons, cards, popups
--color-grid-line	Low-opacity charcoal	Faint blueprint/graph-paper background grid, full viewport

DESIGNER DECISION: Per-project accent colors (e.g. PayGO's purple #662AB2, BharatVibe's #1D0C00, Flashback's #900C3F, Pratham International's #1E352F/#C5A059) are **local to each case study page's hero/gallery section only** — they should never leak into the global site chrome (nav, buttons, footer), which always stays on the core cream/charcoal palette. This keeps the site cohesive while letting each project's own identity show through in its own space.

I.3 — Typography

Role	Typeface direction	Notes
Display / Hero headline	Heavy, custom-feeling, slightly irregular sans-serif — chunky, block-like, minimal tracking	Designer decision: closest production-safe equivalents are Anton, Archivo Black, or Bebas Neue — pick one and use it consistently everywhere a "massive type" moment is called for (case study cover titles, section dividers), not just the homepage.
Body & tagline	Clean geometric sans-serif	Plus Jakarta Sans, Inter, or Montserrat (as originally noted) — pick one family and use it site-wide for body copy
Sub-headline	Light/Regular weight	e.g. "Crafting digital experiences that

Role	Typeface direction	Notes
		blend"
Emphasis text	Semi-bold/Bold weight	e.g. "meaningful aesthetics" / "performant engineering"
Navigation & buttons	Uppercase, medium–bold, slight letter-spacing	For scannability — used on all nav labels and pill buttons site-wide
Case-study body text (long-form reading)	Same body geometric sans, Regular weight, generous line-height	<i>Designer decision: case studies are read, not scanned — line-height ≥ 1.6, max text-block width $\sim 680\text{px}$ for readability</i>

I.4 — Layout, Grid & Z-Index System

- **Background grid:** faint, low-opacity square grid across the full viewport on the homepage; carry a subtler version of this grid into section dividers site-wide for visual continuity (not full-viewport on every page — that would compete with case study imagery).
- **Layer 1 (base):** cream background + grid pattern.
- **Layer 2:** massive display typography (hero sections only).
- **Layer 3:** centered subject imagery (portrait on homepage; hero product screen on case study covers).
- **Layer 4 (top):** navigation, sub-headlines, CTAs — always above imagery and type.

I.5 — Navigation

Floating, right-aligned top navigation bar in a pill-shaped, semi-transparent container. Links: **WORK · SERVICES · ABOUT**. A solid dark pill button, "**LET'S TALK**," anchored at the far right, links to the Contact page.

DESIGNER DECISION: Nav only has 3 links + 1 CTA in the shipped homepage design. That's confirmed as the full site nav (Section L confirms the sitemap) — Contact is reached via the "Let's Talk" button, not a 4th nav link, to keep the pill uncluttered.

I.6 — Buttons

Button	Style
Primary CTA ("Start a Project", "Let's Talk")	Solid black/charcoal, fully rounded pill, bold white text
Secondary CTA ("Download CV")	Solid white/cream pill, subtle border/drop shadow, bold black text
Nav link pill container	Semi-transparent light pill housing uppercase nav labels

(Designer decision — states not visible in the source screenshot, defined for build completeness): Hover: primary buttons darken slightly and lift 2px with a soft shadow; secondary buttons gain a subtle border-color shift.

Active/pressed: scale to 98%. Disabled (e.g. a submit button before a form is valid): 40% opacity, no hover effect.

I.7 — Imagery

- **Hero portrait:** grayscale/monochrome, high contrast, transparent background, centered — as already shipped.
- **Case study imagery:** full color (products should be shown as designed, not desaturated) — the monochrome treatment is a homepage-only device to make the portrait feel sculptural against the type, not a site-wide filter.

- **Icons:** (*designer decision*) a single line-icon set, used consistently — Lucide or Phosphor Icons (both free, consistent stroke-weight, easy to theme in the ink/charcoal color).
- **Illustrations:** none — the visual language is typographic + photographic, not illustrated. Keep it that way for consistency.

I.8 — Motion

DESIGNER DECISION: *Not specified in source. Designer decision, kept deliberately restrained to match the brutalist-lite tone (heavy motion would clash with the static, confident type treatment):*

- Page transitions: simple fade/slide-up on route change (~250–300ms, ease-out).
- Scroll-in reveal: content fades/slides up 16–24px as it enters viewport, staggered slightly for grouped elements (project cards, skill tags).
- Hover: buttons lift 2px; project cards scale to 102% with a soft shadow increase; nav pill background darkens slightly.
- Cursor: default system cursor — no custom cursor for v1 (skip; adds engineering cost without a clear brand payoff at this stage).
- Loader: a minimal centered wordmark/monogram pulse or a thin top-of-page progress bar in `--color-ink` — avoid a full-screen splash animation.

I.9 — Spacing, Radius & Shadow Scale

Token	Value
Spacing scale	4 / 8 / 16 / 24 / 32 / 48 / 64 / 96 / 128 px
Radius — buttons/pills	9999px (full pill)
Radius — cards	16–20px
Radius — images/thumbnails	12px
Shadow — resting card	0 1px 3px rgba(0,0,0,0.06)
Shadow — hover/elevated	0 8px 24px rgba(0,0,0,0.10)

J. Features

DESIGNER DECISION: Answered "skip" across the board. Every feature decision below is a designer/PM judgment call scoped to what a solo student-designer's portfolio actually needs for v1 — biased toward shipping a focused, fast, high-craft site over a feature-heavy one.

Feature	v1 decision	Rationale
Dark mode	Not in v1. Design tokens built dark-mode-ready (semantic color variables) for an easy v1.1 add.	The shipped hero design is a warm light theme; a rushed dark variant would dilute it. Ship light-only, well.
Light mode	Yes — default and only theme at launch.	—
CMS	No CMS in v1 — content lives in a structured config/JSON (see Section L.6 Content Model).	Small, mostly-static content set; a CMS adds infra overhead not justified yet. Recommend Sanity/Contentful as a v1.1 upgrade once content changes get frequent.
Search	No.	Small site (6 case studies); a search bar adds no value at this scale.
Filters	Yes — on Work page: All / Case Studies / Freelance / Graphic Design.	Already scoped in Section F.2
Blog	No — omit page & nav entirely for v1.	Add to roadmap
Contact form	Yes — Name, Email, Project type (dropdown: Freelance project / Full-time role / Just saying hi), Message.	Matches the dual audience (recruiters + freelance clients) established in Section B
Analytics	Yes — privacy-friendly (Vercel Analytics or Plausible) + GA4 if Navneet wants deeper funnel data.	—
SEO	Yes — full metadata, OG images, sitemap.xml, robots.txt (see K.6).	—
Accessibility	Yes — WCAG 2.1 AA target site-wide.	Directly reinforces the PayGO case study's own accessibility narrative — the site should practice what the portfolio preaches.
Newsletter	No.	Not relevant to a personal portfolio
Prototype viewer	Yes — embedded Figma iframes on each case study page (embed codes supplied, see Section F).	—
Protected pages	No password-gated pages. Pratham International case study simply omits sensitive content rather than being access-gated.	Simpler to build and maintain
Resume download	Yes — button in hero (already designed) and again on About page.	—
Timeline	Yes — Experience + Education + Achievements combined into one vertical timeline component on the About page.	—

Feature	v1 decision	Rationale
Testimonials	Yes — placeholder carousel (Section H.3), swappable for real content later.	—
AI chatbot	No — not in v1. Out of scope for a solo portfolio site; would need ongoing maintenance Navneet hasn't asked for.	Listed as a future idea only

J.1 — Future Ideas / Roadmap (also see Section M.4)

- Dark mode toggle
- Blog / write-ups (design process notes, hackathon retrospectives)
- CMS migration for easier content updates
- Real testimonials replacing placeholders
- Expanded case studies (deeper research artifacts, usability test results) as they become available
- Multi-language support (Hindi) if audience data supports it

K. Technical Specification

DESIGNER DECISION: Answered "skip" — the stack below is chosen specifically to fit: (a) the "Creative Developer" brand positioning, (b) the animation-heavy, type-led design, (c) a solo developer/small team building and maintaining it, and (d) zero/low hosting cost.

K.1 — Framework & Core Stack

Layer	Choice	Why
Framework	Next.js (React, App Router)	Best SEO story of the React ecosystem (matters — this is a job-hunting tool); easy path to a future blog; static generation for case study pages keeps them fast
Styling	Tailwind CSS	Matches the utility-first, systemized approach implied by the "Design Systems" skill claim; fast to theme with the design tokens in Section I
Animation	Framer Motion	Handles the scroll-reveal and hover-lift motion spec in Section I.8 with minimal code
Forms	React Hook Form + Zod validation	Type-safe, minimal-boilerplate contact form validation
Email delivery (contact form)	Resend or Formspree	Serverless email without standing up a backend

K.2 — Hosting & Domain

- **Hosting:** Vercel (native Next.js support, generous free tier, automatic CI/CD from GitHub).
- **Domain:** (TBD — Navneet to purchase). Recommend `navneetpatidar.com` or `navneetpatidar.design` if available.
- **Deployment:** auto-deploy on push to `main`; preview deployments on pull requests.

K.3 — Performance Targets

- Lighthouse score target: 90+ across Performance, Accessibility, Best Practices, SEO.
- Images served via `next/image`, WebP/AVIF, responsive `srcset`, lazy-loaded below the fold.
- Fonts self-hosted or loaded via `next/font` to avoid layout shift and external request latency.
- Figma prototype iframes lazy-loaded (only mount when scrolled near viewport) — they're heavy and appear on every case study page.

K.4 — Breakpoints

Breakpoint	Width
Mobile	375px – 767px
Tablet	768px – 1023px
Laptop	1024px – 1439px

Breakpoint	Width
Desktop	1440px – 1919px
Large desktop	1920px+

DESIGNER DECISION: The homepage hero design (massive overlapping type + centered portrait) is the single hardest section to make responsive — see Section L.3 for the required mobile behavior.

K.5 — Browser Support

Latest 2 versions of Chrome, Safari, Firefox, and Edge. No IE11/legacy support required.

K.6 — SEO

- Per-page `<title>` and meta description (see Section L.7 for exact copy per page).
- Open Graph + Twitter Card images per page (hero portrait for Home/About; project hero screen for each case study).
- `sitemap.xml` and `robots.txt` generated at build time.
- Structured data (JSON-LD): **Person** schema on the About/Home page; **CreativeWork** schema on each case study page.
- Semantic HTML throughout (`<main>`, `<nav>`, `<article>` for case studies, proper heading hierarchy — no skipped heading levels).

K.7 — Folder Structure

- `/app` — Next.js App Router pages (`/`, `/work`, `/work/[slug]`, `/services`, `/about`, `/contact`)
- `/components` — reusable UI (Button, Card, Nav, Footer, Timeline, TestimonialCarousel, CertificateStrip, ProjectCard, EmbedFrame)
- `/content` — structured project/experience/achievement data (see Content Model, Section L.6)
- `/public/images`, `/public/certificates`, `/public/resume`
- `/lib` — utilities (SEO helper, animation variants, form schema)

L. Developer Requirements

This section is the direct build brief — sitemap, page-by-page content/structure, component behavior, states, and acceptance criteria. A developer (or AI build agent) should be able to work from this section plus Sections F and I without asking follow-up questions.

L.1 — Sitemap & Navigation

#	Page	Path	Nav item?
1	Home	/	— (logo/name links here)
2	Work	/work	WORK
3	Case Study (dynamic, ×6)	/work/[slug]	Reached via Work grid cards
4	Services	/services	SERVICES
5	About	/about	ABOUT
6	Contact	/contact	LET'S TALK (button, not text link)

Slugs: /work/pratham-international, /work/paygo, /work/bharatvibe, /work/flashback, /work/amazon-redesign, /work/isro-2-0.

DESIGNER DECISION: A 7th page or a separate route for the Graphic Design gallery was considered and rejected — it's a *filter tab inside `/work`*, not a separate page, to keep the sitemap and nav exactly as small as the shipped design implies (3 nav links + 1 CTA).

L.2 — Page-by-Page Content Structure

1. Home (/)

- Header: floating pill nav (WORK · SERVICES · ABOUT) + "LET'S TALK" button — exactly as already designed and shipped.
- Hero: massive background type ("UI/UX DESIGNER" / "CREATIVE DEVELOPER"), centered monochrome portrait, sub-headline + emphasis text, "Start a Project" (primary) + "Download CV" (secondary) buttons — exactly as already designed and shipped.
- **New section below the fold (not yet designed — spec only):** "Selected Work" — 3 featured project cards (Pratham International, PayGO, BharatVibe recommended as the 3 most distinctive) linking to /work/[slug], with a "View all work →" link to /work.
- **Skills strip:** compact tag/pill row of core skills from Section D.1.
- **Testimonial carousel:** placeholder testimonials (Section H.3).
- **Footer CTA band:** "Let's build something worth shipping" + Start a Project button + social links (LinkedIn, Behance, GitHub, email).

2. Work (/work)

- Page header: "Work" (massive display type, smaller than homepage hero but same typeface) + one-line intro: "6 case studies. 2 logos. A stack of posters. All of it built the same way — problem first."
- Filter tabs: All / Case Studies / Freelance / Graphic Design (Section F.2 / F.9).

- Project grid: cards in the order defined in Section F.2, each showing hero image, title, one-line subtitle, and tag pills.
- Graphic Design tab: masonry image grid per Section F.9 (ship with a "coming soon" empty-state message if assets aren't uploaded yet — do not block launch on this).

3. Case Study template (`/work/[slug]`)

One shared template, rendering only the sections that have content for that project (see Section F.1's framework and the per-project notes in F.3–F.8 for which sections apply to which project):

- Cover: title, subtitle, meta row (role · team · timeline · platform · type tag), hero visual.
- Executive summary block.
- Problem statement (where documented — PayGO, Pratham International).
- Process / strategy / features (varies per project — see individual specs).
- Visuals — embedded Figma prototype where a code snippet exists (PayGO, BharatVibe, Flashback, Amazon, ISRO 2.0); Pratham International instead shows its published color-system graphic (no prototype).
- Outcome / impact / reflection (where documented).
- "Next Project" navigation card (Section F.10) — mandatory on every case study, no exceptions.

4. Services (`/services`)

DESIGNER DECISION: No content was supplied for this page — but it's in the shipped nav, so it must exist. Decision: build a focused services page reflecting Navneet's actual freelance offerings as evidenced by his project work (UI/UX design, product design consulting, branding/graphic design per the Vedam Advisors and Pratham International work) — copy drafted below, ready to publish or adjust.

- **Section 1 — headline:** "What I can do for your product"
- **Service 1 — Product & UI/UX Design:** end-to-end design from problem framing to a build-ready Figma file — used for PayGO, Pratham International.
- **Service 2 — Accessibility & Inclusive Design:** designing for the users most interfaces design around, not for — direct reference to PayGO.
- **Service 3 — Brand & Graphic Design:** logos, social creatives, visual identity systems — direct reference to Vedam Advisors experience.
- **Service 4 — Front-end handoff / build:** design systems and components documented well enough to build directly — reference to the "Creative Developer" positioning.
- Closing CTA: "Start a Project" button → `/contact`.

5. About (`/about`)

- Long bio (Section A.4).
- Design philosophy + core values (Section A.5–A.6).
- Skills grid (Section D).
- Combined Experience + Education + Achievements timeline (Section E, C, G).
- Certificate strip (Section C.4).
- Resume download button.

6. Contact (/contact)

- Headline: "Let's talk about your project" (or similar, matching brand voice).
- Contact form: Name, Email, Project type (dropdown), Message. Submit → Resend/Formspree → forwards to designer.navneet.patidar@gmail.com.
- Direct contact details: email (always visible as text/link), phone (click-to-reveal per Section H.1 recommendation), location (New Delhi, India).
- Social links: LinkedIn, Behance, GitHub.

L.3 — Responsive & Device Behavior

DESIGNER DECISION: The design system provided is homepage/desktop only. The hardest element to adapt is the hero's overlapping massive type + portrait layering — explicit rules below so this isn't left to guesswork.

- **Desktop (1024px+):** hero exactly as designed — full-bleed background type lines, centered portrait overlapping both lines, floating nav, stacked CTA buttons below tagline.
- **Tablet (768–1023px):** reduce background type font-size proportionally; keep portrait centered and overlapping but reduce its width to ~60% of the previous scale so type is still legible at the edges.
- **Mobile (<768px):** stack the layout — background type shrinks further and may wrap to 2 lines per word if needed ("UI/UX" / "DESIGNER" / "CREATIVE" / "DEVELOPER"); portrait scales down and sits centered; nav collapses to a hamburger menu revealing WORK / SERVICES / ABOUT / LET'S TALK as a full-height overlay, using the NP monogram in place of the wordmark in the collapsed header bar.
- All case study Figma embeds: on mobile, replace the fixed 800×450 iframe with a responsive wrapper (aspect-ratio: 16/9; width: 100%) rather than the fixed pixel dimensions in the supplied embed codes.
- Grid/filters on /work: 3-column desktop → 2-column tablet → 1-column mobile.

L.4 — Interaction States (site-wide)

State	Requirement
Hover	Buttons lift 2px + shadow; cards scale 102%; nav links underline or background-shift
Focus (keyboard)	Visible focus ring on all interactive elements (outline), never outline: none without a replacement — required for accessibility
Loading	Contact form submit button shows an inline spinner + disables itself; case-study Figma iframes show a skeleton/placeholder block until loaded
Error	Form fields show inline validation messages in red-adjacent tone (not clashing with the warm palette — use a muted terracotta, not pure red); failed form submission shows a toast/inline banner with a retry option
Empty state	Graphic Design tab before assets are uploaded: centered message "More visual work coming soon" with the same grid skeleton outline, not a blank page
404	Custom 404 page matching brand type treatment ("404" set in the massive display font) with a "Back to Work" CTA

L.5 — Reusable Component Inventory

- `<Nav />` — floating pill nav + CTA, collapses to mobile menu
- `<Button variant="primary"|"secondary" />`
- `<ProjectCard />` — used on Home (featured) and Work (full grid)
- `<CaseStudyTemplate />` — accepts a project content object, conditionally renders sections
- `<EmbedFrame src />` — responsive Figma iframe wrapper with lazy-load + skeleton state
- `<Timeline />` — renders Experience/Education/Achievements entries chronologically
- `<CertificateStrip />`
- `<TestimonialCarousel />`
- `<ContactForm />`
- `<Footer />`

L.6 — Content Model (for the `/content` data layer, no CMS in v1)

Each project should be one object in a `projects` array, e.g.:

```
{
  slug: "paygo",
  title: "PayG0",
  subtitle: "A Voice-Guided UPI Layer for the Users Fintech Forgot",
  tags: ["Case Study", "Accessibility"],
  role: "Solo UX/UI Designer",
  timeline: "2025",
  platform: "Mobile",
  heroImage: "/images/paygo-hero.png",
  problem: "...",
  process: [ { heading: "...", body: "..." } ],
  embedCode: "<iframe .../>",
  outcome: "...",
  fonts: ["Noto Sans"],
  colors: ["#662AB2", "#FFFFFF"]
}
```

Fields left empty (e.g. `problem: null` for Flashback) should cause the template to skip that section entirely — never render an empty heading.

L.7 — Metadata Per Page

Page	Title tag	Meta description
Home	Navneet Patidar — UI/UX & Product Designer	Crafting pixel-perfect user interfaces today, while engineering the scalable product experiences of tomorrow.
Work	Work — Navneet Patidar	Case studies, freelance work, and visual design by Navneet Patidar, UI/UX & Product Designer.
Case study (per project)	[Project Title] — Navneet Patidar	[Project subtitle]
Services	Services — Navneet Patidar	Product design, accessibility-first UX, brand design, and front-end-ready handoff.
About	About — Navneet Patidar	UI/UX & Product Designer and

Page	Title tag	Meta description
		B.Tech IIoT student at USAR, GGSIPU, New Delhi.
Contact	Contact — Navneet Patidar	Get in touch about a project, a role, or just to say hi.

L.8 — Naming Conventions

- Components: PascalCase (`ProjectCard.tsx`)
- Files/assets: kebab-case (`paygo-hero.png`, `certificate-aws-cloud-club-2025.jpg`)
- Routes/slugs: kebab-case, lowercase (`isro-2-0`, not `ISRO_2.0`)
- CSS: Tailwind utility classes; any custom classes in kebab-case

L.9 — Acceptance Criteria (Definition of Done)

- All 6 nav destinations resolve and match the sitemap in L.1.
- All 6 case studies render with only their documented sections (no placeholder Lorem Ipsum, no fabricated metrics).
- Site is fully navigable and legible at all 5 breakpoints in K.4, with the hero specifically verified against the rules in L.3.
- Lighthouse scores ≥ 90 on Performance, Accessibility, Best Practices, SEO (mobile and desktop).
- Contact form successfully delivers a test submission to `designer.navneet.patidar@gmail.com`.
- All external links (LinkedIn, Behance, GitHub) open in a new tab and are typo-free.
- All Figma embed codes load correctly and are responsive per L.3.
- No axe/accessibility-linter errors on any page; keyboard-only navigation reaches every interactive element with a visible focus state.
- Resume download button is wired to a real file before launch (tracked in Section M.6).

L.10 — Restrictions

- No screenshots, prototype links, or client-sensitive details for Pratham International beyond what's written in Section F.3 — confirm with client before publishing even that (Section F.3 note).
- No dark patterns in the contact form or CTAs (no fake urgency, no pre-checked opt-ins).
- No third-party fonts used without checking license terms for web-embedding (especially if a paid display font is chosen over Anton/Archivo Black/Bebas Neue).
- No stock imagery — see Section A.9.

M. Final Review

M.1 — Desired Impression

A recruiter or client should come away thinking: *this person does real research, ships real interfaces, and can talk to engineers*. Confident, credible, detail-obsessed — not a generic template portfolio.

M.2 — Recruiter Takeaway (one sentence)

"Navneet can independently take a product from a research problem to a polished, accessible UI — and understands enough front-end to hand it off cleanly."

M.3 — Confidential Information

Pratham International: see Section F.3's confidentiality note — verify client sign-off on the client name and feature description before publishing. No financial data, no client screenshots, no prototype link for this project, ever, regardless of future site updates.

M.4 — Roadmap (post-launch)

- v1.1 — Dark mode toggle
- v1.1 — Real testimonials replacing placeholders
- v1.2 — Blog / write-ups section
- v1.2 — CMS migration for easier content updates
- Ongoing — new case studies as projects complete; refresh achievements list each competition season

M.5 — Maintenance & Update Frequency

- **Maintenance owner:** Navneet (content), developer/agent (structural changes).
- **Update frequency:** achievements and experience — as they happen; case studies — added as completed; design system — stable, changed only deliberately, not per-project.

M.6 — Writing Tone

Confident, clear, and human — avoid buzzword-heavy corporate speak. Case studies should read like a sharp design walkthrough given to a colleague, not a marketing pitch. The one deliberate exception is BharatVibe, where a warmer, more poetic voice is part of the concept itself (Section F.5).

M.7 — Legal & Copyright

- Footer copyright line: "© 2026 Navneet Patidar. All rights reserved."
- Contact form: include a short line near the submit button — "Your details are only used to respond to your message."
- No cookie-consent banner required if analytics chosen is privacy-friendly (Plausible/Vercel Analytics) and doesn't set tracking cookies; add one if GA4 with cookies is used instead.

M.8 — Final Notes & Outstanding Asset Checklist

Everything below is safe to launch without — the site should ship on schedule with placeholders — but should be tracked and swapped in as soon as available:

Asset	Status	Where it's used
Resume PDF	Pending	Hero "Download CV" button, About page
Real testimonials (3+)	Pending	Home / About testimonial carousel
Additional certificates (beyond AWS Cloud Club)	Pending — "ask me later"	Certificate strip, About page
Logo files (2)	Pending	Graphic Design gallery tab
Poster files (15–20)	Pending	Graphic Design gallery tab
Pratham International client sign-off on public description	Pending confirmation	Section F.3
Domain name purchase	Pending	Hosting/DNS
High-quality profile photo variants (color, for case-study-adjacent use if ever needed)	Have monochrome hero version only	Currently sufficient — flag only if a second use case arises
